Usaha. Takwa. Mulia.

FPA envisioned to become a leading faculty in the field of Plantation Management and Agrotechnology through teaching and learning, research and consultancy activities. Also, FPA shoulders a mission is to strengthen academic excellence of international standing through teaching and learning, research and professional services to stimulate transformation in the plantation and the agricultural sectors. FPA aims to produce quality graduates who are competitive and capable of bringing about transformations in the plantation and agricultural sectors, thus becoming the center of excellence and reference in the field of plantation management and agro technology. Lastly, FPA is determined to develop the areas of plantation and agro-technology in a more focused and detailed manner through the offering of new programs to fulfill both present and future needs of the country.

SUGGESTIONS AND RECOMMENDATION

The place are very suitable for student which is it very related to agriculture since it has variety of crop such as durian, Tongkat Ali, coffee and many more. The place a very recommended and we recommend our future generations would come and learnt as many as they can from this farm.

Besides, a few improvement should be taken, for instance the time of the trip should be extended more. This is because we could not enough time to explore more since the farm was large which also include the livestock area in the farm. Other than that, we also not enough time to explore more activities such as grouping activities that make the field trip become interesting and cleared in learning.

Taste the flavor of coffee before processed

THINK THAT IF YOU WERE RAISED ON A FARM, YOU WERE BORN WITH DIRT IN YOUR SHOES. AND ONCE YOU GET DIRT IN YOU SHOES, YOU CAN'T EVER GET IT OUT.

The students receive the explanation of quail birds by the officers

KEY PERFORMANCE ACHIEVEMENT

The students have got the explanation of some things which are related to the subject. Students learnt the processing of propagation techniques that are applied in the farm and got the explanation of new maintenance operation for the plants. Other than that, officer explained the type of vegetables, fruit and herb that have been planted in the farm. Apart from that, the students learnt the method of quail breeding and can be recognized the types of quail birds. Students also got the experience to feed the livestock such as cows, goats and deer, and the ostrich. Besides the students also got the experience to touch, taste and smell the real of plants that have been planted there such as the coffee trees.

Through this field trip, students got the extensive and deep grown exposure about the subject of 'Production of Fruit and Vegetables Crop' (AGR 442) in order have experienced on the latest agricultural methods. Students can identified the practical, effective and best planting controls and care as well as environmentally friendly on research technology now. Besides, students become more understanding and have new knowledge about the subject. This field trip make students turn and training more creative in agriculture sector.

Students feed the fruit sampling during lunch time
